

Starsign — Sheets and Demos

How this drive is laid out, and how to find your part in about ten seconds.

1 originals · 1 covers · 0 horn arrangements written

The top level

- 1 ... Starsign originals (one folder per tune, A–Z)
- 2 ... Covers
- 3 ... Covers that need a vocalist (no singer, so mostly parked)
- 4 **Works In Progress** (not gig-ready – do not learn these yet)
- 5 **Archive** (old versions of everything, kept forever)
- 6 **Inbox** (drop new sheets here – Joel's next update files them)

The number is only there to force the sort order. Ignore it when you are searching — typing the song name into Drive search still finds it instantly.

Finding your part

- 1 Open the song folder.
- 2 Open the **What's Here** PDF at the bottom of that folder. It lists every sheet in the tune, which instruments each arrangement needs, and which sheets are still blank.
- 3 Go to the folder for your section — **1 Lead Sheet**, **1 Rhythm**, or the **nH** horn arrangement matching how many horns are on the gig.

Every song folder looks like this

- 1 **Amplitudes**
 - 1 **Lead Sheet**
 - 1 **Rhythm**
 - 1H the whole tune on one horn
 - 3H Tpt Alt Ten ← a horn arrangement
 - Demos audio Extras strings, guests, odds and ends
 - Horn Part Guides what differs between your parts
 - Reference PDFs transcriptions and notes, on some tunes
 - Update Notes yy-mm-dd what changed, per player
 - Version History the archive — never play from here
 - AMPL – Recordings.pdf · AMPL – What's Here.pdf

A PDF being there does not mean the part is written. Some sheets are still blank templates — form and rehearsal marks, no notes. Each song's **What's Here** PDF says which.

Reading the horn folder names

This is the only thing in the drive you have to learn. It takes a minute.

3H	Tpt	Alt	Ten
↓	↓	↓	↓
3 horns	trumpet	alto sax	tenor sax

The number before **H** is how many horn players the arrangement is written for. Everything after it lists the instruments in score order, highest to lowest. A number in front of an instrument means more than one of them: **2Tpt** is two trumpet parts, **2Ten** is two tenor parts.

The instrument codes

Tpt	Trumpet	Ten	Tenor sax
Flg	Flugelhorn	Bar	Bari sax
Flu	Flute	Bsx	Bass sax
Clā	Clarinet	Bcl	Bass clarinet
Sop	Soprano sax	Tbn	Trombone
Alt	Alto sax	Btb	Bass trombone

The standard ladder

Unless a tune says otherwise, arrangements are built up in this order:

2H	Trumpet, Tenor sax
3H	Trumpet, Alto sax, Tenor sax
4H	Trumpet, Alto sax, Tenor sax, Trombone
5H	Trumpet 1 & 2, Alto sax, Tenor sax, Trombone
6H	Trumpet 1 & 2, Alto sax, Tenor sax, Soprano sax, Trombone
7H	Trumpet 1 & 2, Alto sax, Tenor sax, Soprano sax, Trombone, Bass trombone

2H is fixed — always trumpet and tenor.

3H, 4H and 5H — the alto is the seat that sometimes gets swapped for clarinet, flute or something else; the other horns stay put.

6H and 7H — soprano sax is the standard sixth horn (not a second tenor), and the soprano is the seat most likely to be swapped.

Either way, **trust the folder name over this ladder** — it spells out what the chart actually calls for.

1H — one-horn versions

A **1H** folder holds the whole tune on a single horn part, one sheet per instrument (trumpet, alto, tenor, trombone...) — for gigs where only one horn shows up, or for practising the tune on your own. None are written yet.

“Any Horns” arrangements

Folders like **3H Any Horns** are not written for named instruments — they are written for **chairs**. Find the chair your instrument covers below, then open that horn number for your instrument (Horn 2 – Alto Sax) or, on older tunes, in your transposition (**in B $\flat$** , **in E $\flat$** , **in C**, **bass clef** or **alto clef**).

2-Horn Arrangement

HORN INSTRUMENTS THAT COVER THIS CHAIR		AMATEUR RANGE	PRO RANGE
1	Soprano sax, clarinet, trumpet, alto sax, violin	G#3–G#5	E3–C#6
2	Tenor sax, bari sax, trombone, bass clarinet, cello	G#2–B4	G#2–D5

3-Horn Arrangement

HORN INSTRUMENTS THAT COVER THIS CHAIR		AMATEUR RANGE	PRO RANGE
1	Clarinet, soprano sax, trumpet, alto sax, violin — a flute variation is also provided	G#3–G#5	E3–C#6
2	Trumpet, clarinet, alto sax, tenor sax, viola	E3–D#5	E3–C#6
3	Tenor sax, bari sax, trombone, bass clarinet, cello	G#2–B4	G#2–D5

Horn 1 is the top line. The two ranges cover the same music: the wider **pro range** is what the part actually asks for, the **amateur range** is the narrower span you can get away with when the extremes are out of reach. Pick the chair that suits the player, not just the instrument — an alto can sit in chair 1 or chair 2 of the 3-horn.

Song index

Every file inside a song folder starts with that song’s four-letter code, so `AMPL – Trumpet.pdf` is the trumpet part for Amplitudes.

CODE	SONG	LEAD	RHYTHM	HORN ARRANGEMENTS	BLANK
STARSIGN ORIGINALS					
TEST	Test Song	blank	4 parts	none yet	8
COVERS					
OTHR	Other Tune	blank	4 parts	none yet	8

The rest of it

Extras

Anything that is neither a horn nor a rhythm part: violin, cello and combined **Strings** scores, parts written for guest players who sat in, alternate takes on a part, and the occasional full score. Worth a look if you cannot find yourself in Rhythm or a horn folder.

Version History

Every song folder has one, and there is a big **5 Archive** at the top level too. Old sheets are never deleted here — they are moved. Two things to know:

- Archived files keep their **original names**, including the old convention of naming a part after its player. That is deliberate: it is the record of who played what.
- **5 Archive / Old 6-Horn Arrangements** is a complete snapshot of the library as it stood before the current arrangements. History, not current music.

Works In Progress

Tunes still being written or reworked. They are kept out of the main list on purpose — do not spend practice time on them until Joel moves them up.

The PDFs

FILE	WHAT IT IS
Starsign Band Guide.pdf	This document. Lives at the top level.
XXXX – What’s Here.pdf	One inside every song folder. Every sheet in that tune, the exact instrumentation of each arrangement, and which sheets are still blank.
XXXX – Recordings.pdf	One inside every song folder. Links to every album take, live session and filmed show of the tune.
Horn Part Guides/XXXX – <you>.pdf	For each horn player: where your parts in the 1-, 2- and 3-horn charts are the same and where they differ.
Update Notes …/XXXX – Changelog – <you>.pdf	What changed on your sheets, newest first. The folder’s date is the last time the tune changed.
Starsign Progress – Joel.pdf	Joel’s writing tracker — handy if you want to know why a part does not exist yet.
Starsign Maintenance Report.pdf	The log of every update to this drive.

A few older parts could not be matched to an instrument automatically and are named after the player instead (“CODE - name (unlabeled).pdf”). If you recognise one, tell Joel and it will get a proper name.
